Lynside® Forte Zn

The zinc fortified yeast

Immunity is now one of the major concern for a lot of consumers. Zinc is a natural essential trace element with an action on immune health, found in low concentration in food¹.

According to the US regulations², the minimum daily intake required for zinc is 11 mg. Thanks to a high bioavailable source of zinc provided by Lynside® Forte Zn, it's easy to reach 100% of the US recommended daily intake with small quantities of Lynside® Forte Zn (110 mg per day).

During the carefully controlled process, zinc is added after the fermentation step. At the end of our process, we obtain a unique product which provides a better zinc bioavailability compared to other mineral forms of zinc.

Target: functionality of immunity and cell support

Protection against oxidation

Protection of cells constituents from oxidative damage¹

Immunity

Normal function of the immune system¹

yeast Zn

High bioavailable source of Zinc

The relative bioavailability of Lynside® Forte Zn is higher³ than other sources of zinc.
